ENHANCE YOUR SECURITY

A Layered Approach to Stop Cybercriminals

CITYNET

THE EVOLUTION OF SMB SECURITY

Let's face it—in the fight against cybercriminals, antivirus (AV) tools are no longer enough. As hackers develop new ways of bypassing legacy sytems, infiltrating environments and deploying malicious software, SMBs need to adopt a more integrated and holistic approach to security.

Our managed detection and response (MDR) offering provides the added layer of security you need to stop hackers in their tracks once they've slipped past your AV.

Developed by former NSA cyberwarefare operators, our MDR platform combines powerful automated threat hunting technology with hands-on support from a team of security experts. It's the perfect complement to your existing security stack—identifying threats that would otherwise go unnoticed, and preventing bad actors from dwelling in your network.
