MULTI-FACTOR AUTHENTICATION
(MFA)

WHAT IS MFA?

An easy way for all to increase their digital security!

Multi-factor authentication is a layered approach to securing data and applications where a system requires a user to present a combination of two or more credentials to verify a user's identity for login. MFA increases security because even if one credential becomes compromised, unauthorized users will be unable to meet the second authentication requirement and will not be able to access the targeted physical space, computing device, network, or database.

3 FACTORS OF MFA

1 SOMETHING YOU KNOW

Such as a password, PIN, or passphrase.

2 SOMETHING YOU HAVE

Such as a real-time, unique verification code generated by a mobile app or security token.

3 SOMETHING YOU ARE

Such as a fingerprint, iris scan, or other biometric indicator.

WHY USE MFA?

IT'S EASY
Sites and apps provide simple, step-by-step instructions for adding MFA.

IT'S QUICK
MFA adds just a few seconds to your login process.

IT INCREASES SECURITY
MFA helps to decrease the damage that can be done with a stolen password.

Get Modern MFA Cybersecurity with DUO Deployed by CITYNET®

DUO's MFA solution is flexible for users but rigid against threats. The easy-to-use interface provides a fast and simple authentication experience, helping users focus their time on what matters most.

Verify identity in seconds.

Protect any application on any device.

Easily deploy Duo in any environment.
