

Tips For Password Security

- ✓ Enable phishing-resistant multifactor authentication (MFA) whenever possible
- ✓ If you can, use a password manager and protect it with MFA and/or a long password/passphrase
- ✓ Use a password generator to create truly random passwords with a minimum of 12 characters
- ✓ If you must create a password, use a passphrase with a minimum of 20 characters
- ✓ Never share passwords between accounts
- ✓ Keep your passwords private – never share a password with anyone else
- ✓ Do not write down your passwords

How To Create A Strong, Complex Password

If you must create a password, here's a way to make a strong password that's difficult to crack:

USE ONE OF THESE TWO METHODS

- 1 Create passwords with at least 12 characters that are truly random, ideally using a password generator.
- 2 Think of a random phrase with at least 20 characters that is easy to remember.

EXAMPLE

**R#Yv&ZCAojrX
ELv!2MibAb>RC?ru
a!#+dH)vvLykijhu**

**I went to 7-11 earlier today.
